

PRO LADDER™ DOK

Ladder
Support
For Gutters

Support Where You Need It Most!

The Pro Ladder-Dok is a steel support which easily fits into 5 inch gutters and holds the ladder away from the gutter edge. Pro Ladder-Dok was designed by roofers who were tired of crushing gutters. Pro Ladder-Dok also helps to prevent ladder slippage at the gutter edge. Pro Ladder-Dok's low profile helps transfer the weight from the gutter to the fascia, and does not interfere with the installation of roofing materials.

No More Crushed Gutters!

For use on
5" K-Style Gutter

Installation

After checking the gutter for proper installation, set the ladder up at the desired location and at the proper angle. Climb to the gutter and drop the Pro Ladder-Dok (legs first), into the gutter directly behind the ladder. Simply pull the bar down until it comes in contact with the gutter edge. If properly set, the ladder will now be positioned a half inch away from the gutter.

FITS LADDERS UP TO 19.5" WIDE

NOTE: Please follow all ladder manufacturers directions and cautions regarding ladder set-up and use. No product can help when the ladder is improperly set up.
